Advanta Technologies installs *OurLibrary* at Engineering Firm

“This system has reduced archiving man hours by approximately 90%. Advanta made the transition from our old system to OurLibrary effortless. The system, the knowledge of Advanta representatives and Advanta’s commitment to continued support made our decision to convert an easy one.”

**Scott M. Glaubitz, P.E., P.L.S.
President**

The Engineering Firm of B.S.E. first opened its doors in 1937. By 1986, the demand for Civil and Environmental Engineering was so great that B. S. E. Consultants, Inc. was formed. With the changing face of Florida and the ever-increasing sensitivity to the environment, this Melbourne based company added Wetland Jurisdictional Determinations, and Threatened and Endangered Species Studies to the scope of their professional services.

OurLibrary, a document management system provided by Advanta Technologies, was installed in June of 2003. This system is used to store project documents — including reports, permit applications and correspondence. A Kodak i260 document scanner was included with this system, which allows paper documents to be quickly added to the repository, including color photographs and surveys.

Advanta Technologies developed and utilized the software to migrate 360,000 scanned pages from an earlier system to the *OurLibrary* repository. Searches can be performed for documents containing specific words or phrases inside the text contents — within a few seconds. Documents can be viewed, printed or attached to outgoing email messages.

The server provided with *OurLibrary* has the capacity to store more than a million pages of scanned documents. This capacity should meet the requirements of B.S.E. Consultants for five years or more.

Equipment:

- DellPowerEdge 600SC Server with RAID
- DVD Recorder
- Two (2) 120 GB Hard Drives
- 512 MB Memory
- Kodak i260 (Duplex) Scanner
- *OurLibrary* Document Management Software

B.S.E Consultants’ primary areas of expertise are in general civil, utility, transportation, wetland identification, wetland mitigation, water quality, wildlife / habitat identification and agricultural engineering. B.S.E., with a staff exceeding 150 years of professional experience, has provided professional services for nearly 500 projects in the past five years, having an estimated construction cost of \$1,000,000,000.00.
